

Sameer Nahadiya

+91 7878942074 — samnahadiya211@gmail.com — LinkedIn — GitHub — Jaipur, Rajasthan

Professional Summary

Computer Science undergraduate with a 6-month Software Engineering internship at HPE. Skilled in Python, C++, Linux, Kubernetes, CLI development, and Data Structures & Algorithms, with experience building tools for HPC cluster.

Education

VIT Bhopal University

Bachelor of Technology (B.Tech) – Computer Science Engineering

2023–2027

CGPA: 8.49/10.0

Technical Skills

- **Languages:** C++, Python, Java, SQL
- **Libraries & Frameworks:** C++ STL, Pandas, NumPy, Matplotlib
- **Databases:** MySQL
- **Developer Tools:** Git, GitHub, Visual Studio Code
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOPs), DBMS, Operating Systems, Computer Networks

Internship Experience

Hewlett Packard Enterprise (HPE) - CPP Intern (Remote)

Jan 2026 – Jul 2026

Project: Management Utility for iSCSI SBPS

- Designed and contributed to the implementation of a Python-based CLI management utility for HPC clusters, enabling administrators to retrieve iSCSI SBPS information from a centralized interface instead of manually accessing individual worker nodes.
- Developed CLI commands including `iscsi get nodes`, `iscsi get luns`, `iscsi get metrics`, `iscsi get images`, `iscsi get sessions`, and `iscsi get errors` for streamlined cluster administration.
- Implemented a Linux-based error reporting framework that collected diagnostics from `journalctl`, `dmesg`, and service status logs, improving visibility into storage and system-level issues.
- Authored 250+ lines of Python code, contributed 70+ Git commits, and collaborated within a four-member engineering team using Git-based development workflows.
- Produced comprehensive technical documentation covering architecture, CLI workflows, implementation details, and project progress to support knowledge sharing and future development.

Projects

INTERVIEW.AI

GitHub

React, Node.js, Express.js, MongoDB, JWT, Gemini API, SCSS

- Engineered a full-stack AI-powered interview preparation platform that improved candidate readiness by 40%, by the Google Gemini API to generate tailored strategies from job descriptions.
- Secured sensitive user data and authentication workflows, achieving 100% session integrity, by implementing JWT-based authentication, HTTP-only cookies, token blacklisting on logout, and protected route architectures.
- Enhanced application responsiveness and state management, resulting in a 25% increase in platform engagement, by building dynamic interfaces using React Context API, React Router, and Axios.
- Automated document processing and evaluation workflows, reducing manual analysis time by 2 hours per user, by architecting custom APIs for PDF parsing, structured AI-driven automated interview report generation.

Autocorrect Spell Checker - C++, STL, File I/O

- Architected a highly accurate spell-checking application that successfully resolved 5 distinct types of complex spelling errors (substitutions, insertions, deletions, and hybrids) by implementing advanced lexical heuristics in C++.
- Accelerated dictionary lookup speeds and string-processing efficiency by 40%, by strategically leveraging C++ STL containers and optimizing File I/O operations for large datasets.
- Engineered an end-to-end object-oriented solution capable of processing 10,000+ words per second, by designing robust data structures and efficient file-handling algorithms.

Certifications

- AWS Cloud Technical Essentials Coursera
- The Bits and Bytes of Computer Networking Google (Coursera)
- Introduction to Machine Learning NPTEL (IIT Madras)
- Marketing Analytics NPTEL (IIT Kharagpur)

Achievements & Leadership

- Solved 600+ Data Structures & Algorithms problems on LeetCode, HackerRank, and Codeforces.
- Secured 1st place in Advitya Sports Fest inter-college tournament .
- Discipline Hostel Lead, Hostel Committee. Core Member, Entrepreneurship Cell (E-Cell), NSS Club.
