Professional Summary

Computer Science undergraduate with hands-on experience as a Software Engineering Intern at HPE, engineering CLI utilities and diagnostics for HPC clusters. Proficient in C++, Python, TypeScript, and Data Structures & Algorithms, with solid foundations in full-stack architecture, OOPs, DBMS, Operating Systems, and Git-based collaborative workflows.

Education

VIT Bhopal University

2023 – 2027

Bachelor of Technology (B.Tech) in Computer Science Engineering

CGPA: 8.49/10.0

Technical Skills

- **Languages:** C++, Python, SQL
- **Frameworks & Libraries:** Next.js, React, Node.js, Express.js, C++ STL
- **Databases & Cloud Tools:** MongoDB Atlas, Inngest, Better Auth, REST APIs, Git, GitHub, Linux, VS Code
- **Core Concepts:** Data Structures & Algorithms, OOPs, DBMS, Operating Systems, Computer Networks

Internship Experience

Hewlett Packard Enterprise (HPE) – Software Engineering Intern, CPP Team

Jan 2026 – Jul 2026

Project: Management Utility for iSCSI SBPS (Remote)

- Built a Python-based CLI tool for HPC clusters, allowing administrators to query iSCSI SBPS metadata centrally without per-node SSH sessions.
- Implemented CLI commands including `iscsi get nodes`, `luns`, `metrics`, `images`, `sessions`, and `errors` for cluster monitoring.
- Engineered a Linux diagnostics aggregator parsing `journalctl`, `dmesg`, and system services to detect storage bottlenecks early.
- Authored technical architecture docs and CLI runbooks, contributing 250+ lines of Python across 70+ Git commits in an Agile team.

Projects

StockUp – Real-Time Stock Tracking Application

GitHub

Node.js, MongoDB Atlas, Finnhub API, Google Gemini AI, Inngest, Better Auth, Nodemailer

- Developed a full-stack stock tracking web application enabling real-time market monitoring, AI-powered insights, and personalized watchlist management.
- Integrated Finnhub API for live data feeds and Gemini AI for automated market summaries, elevating accuracy and user retention.
- Implemented JWT-based authentication via Better Auth, secure MongoDB Atlas schemas, and background job orchestration via Inngest for email notifications.
- Improved performance with 45% faster API response times and 35% system efficiency gains via Server-Side Rendering (SSR), query caching, and async workers.

INTERVIEW.AI

GitHub

React, Node.js, Express.js, MongoDB, JWT, Gemini API, SCSS

- Built an end-to-end AI mock interview preparation platform utilizing the Gemini API to parse job descriptions and generate custom preparation strategies.
- Handled stateless authentication using JWT, HTTP-only cookies, token blacklisting, and protected routes, achieving 100% session integrity in testing.
- Managed state via React Context API and Axios, building modular REST APIs for PDF resume extraction and AI-driven performance reports.

Autocorrect Spell Checker

C++, Standard Template Library (STL), File I/O

- Engineered a C++ spell checker handling substitutions, insertions, deletions, and hybrid errors via custom lexical heuristics.
- Optimized dictionary lookups and file parsing by 40% using STL unordered maps and buffered I/O, processing over 10,000 words per second.

Certifications

AWS Cloud Technical Essentials

Coursera

The Bits and Bytes of Computer Networking

Google (Coursera)

Achievements & Leadership

- Solved **500+** Data Structures & Algorithms problems across LeetCode, HackerRank, and Codeforces.
- Won **1st Place** at Advitya Sports Fest inter-college tournament.
- Served as **Discipline Hostel Lead** (Hostel Committee); Core Member at **E-Cell** and **NSS Club**.
