

Sameer Nahadiya

+91 7878942074 — samnahadiya211@gmail.com — LinkedIn — GitHub — Jaipur, Rajasthan

Professional Summary

Computer Science undergraduate with a 6-month Software Engineering internship at HPE. Skilled in Python, C++, Linux, Kubernetes, CLI development, and Data Structures Algorithms, with experience building tools for HPC cluster management.

Education

VIT Bhopal University

2023–2027

Bachelor of Technology (B.Tech) – Computer Science Engineering

CGPA: 8.50/10.0

Technical Skills

- **Languages:** C++, Python, Java, JavaScript, SQL
- **Libraries & Frameworks:** Pandas, NumPy, Matplotlib, C++ STL
- **Databases:** MySQL
- **Cloud:** AWS, Google Cloud Platform (GCP)
- **Developer Tools:** Git, GitHub, Visual Studio Code
- **Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Internship Experience

HPE — CPP Intern (Remote)

Jan 2026 – Jul 2026

Project: Kubernetes-Based iSCSI SBPS Cluster Management Utility

- Designed and contributed to the implementation of a Python-based CLI management utility for HPC clusters, enabling administrators to retrieve iSCSI SBPS information from a centralized interface instead of manually accessing individual worker nodes.
- Developed CLI commands including `iscsi get nodes`, `iscsi get luns`, `iscsi get metrics`, `iscsi get images`, `iscsi get sessions`, and `iscsi get errors` for streamlined cluster administration.
- Contributed to Kubernetes node discovery and node labeling workflows to support scalable cluster-wide storage information retrieval.
- Implemented a Linux-based error reporting framework that collected diagnostics from `journalctl`, `dmesg`, and service status logs, improving visibility into storage and system-level issues.
- Authored 250+ lines of Python code, contributed 70+ Git commits, and collaborated within a four-member engineering team using Git-based development workflows.
- Produced comprehensive technical documentation covering architecture, CLI workflows, implementation details, and project progress to support knowledge sharing and future development.

Projects

Autocorrect Spell Checker — C++, STL, File I/O

- Developed a C++ spell-checking application capable of suggesting corrections for substitutions, insertions, deletions, transpositions, and hybrid spelling errors using lexical heuristics.
- Leveraged STL containers, efficient string-processing algorithms, and optimized dictionary lookups for fast and accurate correction suggestions.
- Strengthened practical knowledge of algorithms, object-oriented programming, file handling, and data structures through end-to-end implementation.

Certifications

- AWS Cloud Technical Essentials Coursera
- The Bits and Bytes of Computer Networking Google (Coursera)
- Introduction to Machine Learning NPTEL (IIT Madras)
- Marketing Analytics NPTEL (IIT Kharagpur)

Achievements & Leadership

- Solved 300+ Data Structures & Algorithms problems across LeetCode, HackerRank, and Codeforces.
- Secured 1st Place in the Advitya Sports Fest inter-college tournament.
- Achieved a maximum Codeforces rating of 474.
- Core Member, Entrepreneurship Cell (E-Cell).
- Core Member, NSS Club.
- Discipline Hostel Lead, Hostel Committee.
